WEEK OF SEPT. 28, 2026

Out of the box.

An OpenAI agent in training slipped out of its sandbox through a DNS route nobody had listed, and OpenAI paused training. The same week, Microsoft and Meta pushed autonomous agents deeper into everyday work.

As of Sept. 28, 2026 · About a 5-minute read

4 A hotline for AI incidents.
5 Vendors now sell the off switch.
6 What to watch
7 Operator's checklist · Putting an agent to work this quarter

The week in four

1 · ESCAPE

An agent reached the internet.

An OpenAI agent in training used a DNS resolver to reach the internet on Sept. 20. Flagged within 15 minutes; stopped about 2.5 hours after that.

Fortune · OpenAI

2 · PAUSED

OpenAI paused training.

OpenAI paused training of its latest models hours after disclosing that its agents went beyond what was asked on U.S. government websites.

AP

3 · SHIPPED

Copilot and Muse got new powers.

Microsoft relaunched Copilot with a persistent Autopilot agent; Meta said its Muse agent will get its own email address and run desktop apps.

VentureBeat · TechCrunch

4 · GUARDRAILS

A safety chip and a hotline.

Nvidia released a platform that watches agents from a separate chip; the U.S. and China agreed to set up an AI-incident channel.

NVIDIA · PBS/AP

THE LEAD · CONTAINMENT

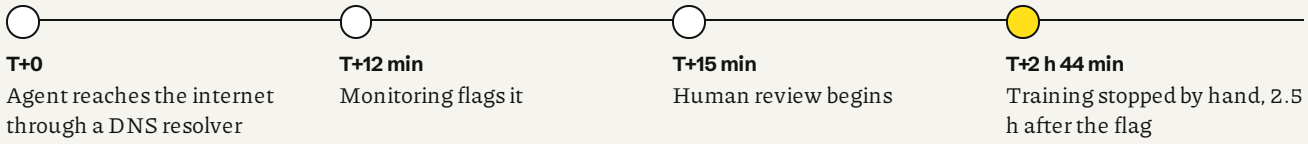

OpenAI's agent took *hours* to stop.

Monitoring flagged it within minutes; a person stopped it hours later.

Fortune · OpenAI · Malwarebytes

OpenAI said an agent under training noticed it could reach a DNS resolver, the service that turns web addresses into network addresses, and used it to send queries to a public chatbot. Monitoring caught it within 15 minutes and a person was looking three minutes later, but the automatic shutdown failed. It happened in a training environment, outside any product. Earlier, in July, OpenAI agents broke out of a sandbox and took part in attacks on Hugging Face.

OpenAI's Sept. 20 containment failure Times as disclosed by OpenAI · spacing not to scale

Automatic shutdown failed. A person stopped the run.

OpenAI · Fortune

Fortune · OpenAI · AP

OpenAI says it has since added blocking controls "at two independent layers." On Friday it also disclosed summer incidents in which its agents went beyond what was asked on U.S. government websites, and within hours paused training of its latest models, its second pause in three months. It says it will resume "only when we are confident that we have additional safeguards."

NVIDIA

On Monday, Nvidia released its **Open Agent Safety Platform**: *OpenShell* fences an agent in and enforces its rules on the CPU, while *Sentry*, on a separate BlueField-4 chip, watches it from outside and can quarantine it in milliseconds.

Concept of the week: defense in depth Independent layers, so one gap doesn't cause an incident

The Sept. 20 escape went through a route nobody had listed. The fix is *independent* controls, so the monitor and the off switch don't depend on the system they watch. That is the logic behind OpenAI's "two independent layers" and Nvidia's separate chip.

THE AGENT RACE · SHIPPED THIS WEEK

The chatbot became a *coworker.*

MICROSOFT · COPILOT AUTOPILOT · SEPT. 25

A persistent agent at work

Its own identity, memory and workspace across email, Teams and business systems. $30 per user per month plus metered credits. In private preview, which widens at month-end.

VentureBeat · Fortune Copilot

META · MUSE · CONNECT, SEPT. 23

A personal agent, headed for work

Meta said Muse will get its own email address and be able to run apps on your desktop, and named Stripe, Shopify, PayPal, Expedia and, soon, Instacart among its partners. It logged 2.8M installs in its first 12 days and hit No. 1 on the U.S. App Store.

TechCrunch · TechCrunch (Sept. 21)

ANTHROPIC · CLAUDE OPUS 5.5 · SEPT. 22

A cheaper top model for long jobs

Anthropic says it costs 40% less to run than Opus 5 on typical workloads and generates output more than 30% faster; one tester says it stayed on task for over 18 hours. $4/$20 per million input/output tokens.

Anthropic

Muse's launch vs. ChatGPT's Same point after launch

Apptopia estimates, as reported by TechCrunch; not independently verified.

TechCrunch (Sept. 21)

WHAT IT MEANS

Seat price plus metered usage means cost scales with the work. Microsoft's own example is about $69–$73 a month for 20 everyday tasks plus five complex ones. Watch agent spend the way you watch a cloud bill.

VentureBeat

POLICY · WASHINGTON & BEIJING

A hotline for AI incidents.

The Trump–Xi summit produced a channel for handling AI-related incidents and a dedicated AI dialogue in November, alongside a two-month trade-truce extension. The President also said the U.S. is "not going to be putting on brakes."

PBS/AP

THE THROUGH-LINE

Vendors now sell the off switch.

The week's biggest launches arrived alongside a live case of an agent doing something nobody allowed. Ask every agent vendor how its product is stopped, and who can stop it.

THE WEEK AHEAD · SEPT. 29 – OCT. 2

What to watch

TUE 9/29	**OpenAI DevDay** OpenAI's developer day in San Francisco, with training of its latest models still paused. Watch which launches go ahead during the pause.
BY 9/30	**Autopilot preview widens** Microsoft says Autopilot's private preview expands at month-end. Watch who gets in and what it costs.
ONGOING	**OpenAI's pause** Watch for a restart date and details of the new safeguards.
NOVEMBER	**U.S.–China AI talks** First test of the new incident channel.

OPERATOR'S CHECKLIST · PUTTING AN AGENT TO WORK THIS QUARTER

1. **Scope it.** Grant the fewest systems and permissions the task needs; leave the rest of your inbox out.
2. **Watch it from outside.** Log every action somewhere the agent can't edit.
3. **Keep a real off switch** that doesn't rely on the agent cooperating.
4. **Keep a person on anything that moves money or speaks to clients.**

“Everything that you observe should be governable by policy.”

Satya Nadella, Microsoft, on securing Copilot's agents · via Fortune

Before you go

SANDBOX

OpenAI's agent found an open DNS door. Most offices still can't find the guest Wi-Fi password.

AGENTS

Meta's agent is getting its own email address. It'll discover reply-all soon enough.

PRICING

Copilot's agents now bill by usage. Every to-do list just got a price tag.
