WEEK OF OCT. 5, 2026

Held at the gate.

OpenAI pulled a new model a day before DevDay after it fell short on staying within its permissions, then launched agents that run around the clock. Google held its own new model back too. Both now treat who gets a model, and when, as a safety control.

The week in four

1 · HELD

OpenAI pulled GPT-6.1 Astra.

OpenAI called off GPT-6.1 Astra's October release on Sept. 28; its safety head said it fell short on staying within scope and authorization.

AAP · Express & Star

2 · SHIPPED

Dots work while you're away.

At DevDay, OpenAI launched dots: ChatGPT agents with their own cloud computer that keep working toward your goals when you're away.

OpenAI dots

3 · GATED

Cyber defenders got Argon first.

Google released Gemini 4 Argon to vetted cyber defenders only, while it finishes testing the guardrails for everyone else.

Google

4 · POLICY

D.C. and California acted.

Six AI companies signed a voluntary White House accord, the FTC confirmed an investigation, and California barred firings decided by AI alone.

AP · ITV News · California Governor

THE LEAD · RELEASE CONTROL

OpenAI *pulls* a model, ships dots.

OpenAI held Astra back and shipped dots with rules users write.

AAP · Express & Star · Fast Company

On Monday, Sept. 28, a day before its developer conference, OpenAI called off the planned October release of GPT-6.1 Astra. Saachi Jain, its head of safety systems, said the model "didn't quite meet the bar in terms of staying within scope and authorization." Australian Associated Press reported that internal testing found it did not meet the company's safety and alignment standards. Training of OpenAI's most advanced models was already paused.

OpenAI dots · Fast Company

The next day, at DevDay in San Francisco, OpenAI launched **dots**: always-on agents in ChatGPT, each with its own cloud computer and browser, running on the current GPT-6 Astra and able to connect to more than 4,000 apps. When you aren't working with one, a dot does what OpenAI calls proactive research through read-only tools, so it can't send messages, change what's in your apps or control your computer. Custom Rules let you allow an action, require approval for it or block it.

What a dot may do on its own OpenAI's controls, from always-on to yours to set

1 Built-in safety requirements, always applied

2 Read-only tools while you're away

3 Custom Rules: require approval

4 Custom Rules: block

DOT

Away from you, a dot uses read-only tools and can't send, edit or control anything. Custom Rules decide which other actions it may take, which need your approval and which are blocked. Write them before you connect your first app.

OpenAI dots

Google

Google limited its own release on Sept. 30. Gemini 4 Argon, which Google says can find, validate and patch critical software vulnerabilities on its own, went first to "trusted cyber defenders" in its Fairwind Program. Google says

monitors watch the model's reasoning and actions and can stop it, and that wider access, starting with paid API customers and Google AI Ultra subscribers, waits until guardrail testing is done.

Astra fell short on staying inside the permissions a person set, a limit every workplace agent has to respect. Dots handle it with read-only background work and rules you write. Google handles it by choosing who gets the model first.

AAP · OpenAI dots · Google

SHIPPED THIS WEEK

Two cheaper models and *reusable* instructions.

OPENAI · GPT-6.1 SOL · SEPT. 29

A cheaper model for agents and code

In ChatGPT Work and Codex for Plus, Pro, Business, Enterprise and Edu users. $2 per million input tokens and $10 per million output, one-fifth of Astra's standard prices. A faster Ultrafast version is due "in the coming days."

OpenAI Sol · Fast Company

ANTHROPIC · CLAUDE SONNET 5.5 · SEPT. 28

The everyday Claude, improved for agent work

A faster, cheaper companion to Opus 5.5 for scoped tasks, bug fixes and documents. Same $2/$10 per million tokens as Sonnet 5; Anthropic reports large gains on agentic coding and computer use.

Anthropic

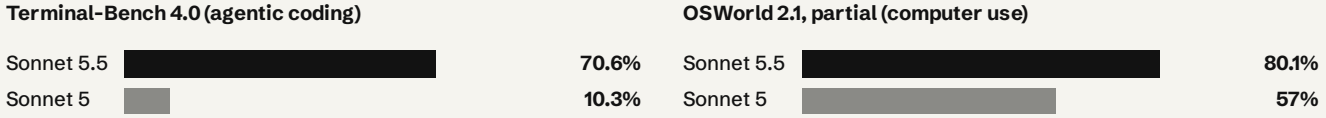

GOOGLE · SKILLS IN GEMINI · SEPT. 30

Reusable instructions you can stack

Skills are saved instructions that work inline in a chat, and they use the open SKILL.md format, so skills made elsewhere carry over. Google said Workspace rollout starts Oct. 5. Gems keep working for now.

Google Workspace Updates

Sonnet 5.5 against Sonnet 5 Anthropic's own benchmark results

Vendor-reported scores; not independently verified.

Anthropic

OpenAI Sol · Anthropic · Google

WHAT IT MEANS

Sol, Sonnet 5.5 and Gemini 4 Argon's introductory rate all list at $2 in and $10 out per million tokens. When prices match, pick on how a model behaves in your own work, and test it there.

POLICY · WASHINGTON & SACRAMENTO

California keeps a *person* in the loop.

On Sept. 29, leaders of Anthropic, Google, Meta, Nvidia, OpenAI and xAI signed a voluntary accord with President Trump. They pledged "robust internal controls," an "independent external auditor" to check them and a board committee to review the audits. The accord says it "may make sense" to write the steps into law over time. The President said he saw "tremendous self-policing" from the companies.

AP · Al Jazeera

A day later, an FTC spokesperson confirmed an investigation into OpenAI, Anthropic and other AI companies over risks to consumers, and California's governor signed 13 AI bills. One, SB 947, bars employers from relying on an automated system alone to discipline or fire workers; it takes effect July 1, 2027. The governor said AI should expand opportunity, "not come at the expense of workers and families."

ITV News · California Governor · TNW (California)

THE THROUGH-LINE

Companies now stage who gets a model.

OpenAI kept one model in the lab and limited its agents' background work to reading. Google chose which users went first. Anyone deploying AI at work should write down what the system may do before a person approves it.

COMING UP · OCT. 5 – OCT. 14

What to watch

MON 10/5	**Skills reach Workspace**	Google's schedule has Rapid Release domains getting skills from today, finishing by Oct. 12.
THIS WEEK	**Sol gets faster**	OpenAI said GPT-6.1 Sol Ultrafast arrives in the coming days, with up to 8x faster output in Codex.
ONGOING	**OpenAI's training pause**	Still no restart date. Watch for the safeguards it said must come first, and for any new date for Astra.
COMING WEEKS	**FTC demands**	Formal civil investigative demands to the companies are expected, according to TNW's account of the probe.

WED 10/14

GPT-5.5 leaves Codex

For users signed in with ChatGPT, at noon Pacific. Switch saved settings and scripts before then.

OPERATOR'S CHECKLIST · BEFORE AN AGENT WORKS UNATTENDED

1. **Write the rules first.** Before a dot or any agent touches an app, decide what it may do alone, what needs your approval and what's blocked.
2. **Start read-only.** Let it watch and draft before it sends or edits anything.
3. **Check which model you're on.** New defaults and retirements arrive weekly; note the one each workflow uses.
4. **Keep a person on decisions about people.** In California, employers won't be able to discipline or fire on an automated system's output alone.

“We have an extremely high bar in terms of safety and alignment.”

Saachi Jain, head of safety systems, OpenAI · via AAP

Before you go

RELEASE

OpenAI's newest model was held back for not staying in scope. Plenty of project plans have the same problem.

AGENTS

Dots work 24/7 and can't send messages while you're away. Some coworkers would call that ideal.

PRICING

Sol, Sonnet 5.5 and Argon all list at $2 in and $10 out. Price comparisons got shorter.
